Industrial Hardware for Game Design

By Ethan Gibson

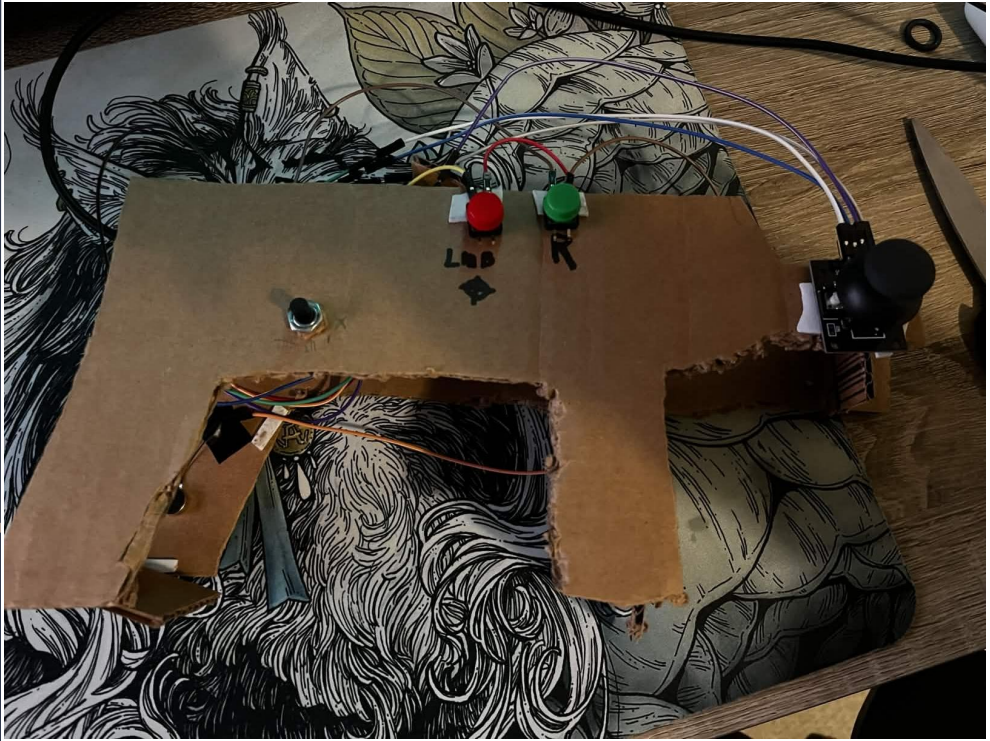
Recap

- Recreate an IR light gun with better immersion and for cheaper
- Use IR cam + 4 IR LEDs
- Mag out + mag in for reload
- Haptics

Tragedy

- Camera broke
  - Switch to joystick
- 3D model got too complex
  - Cardboard backup

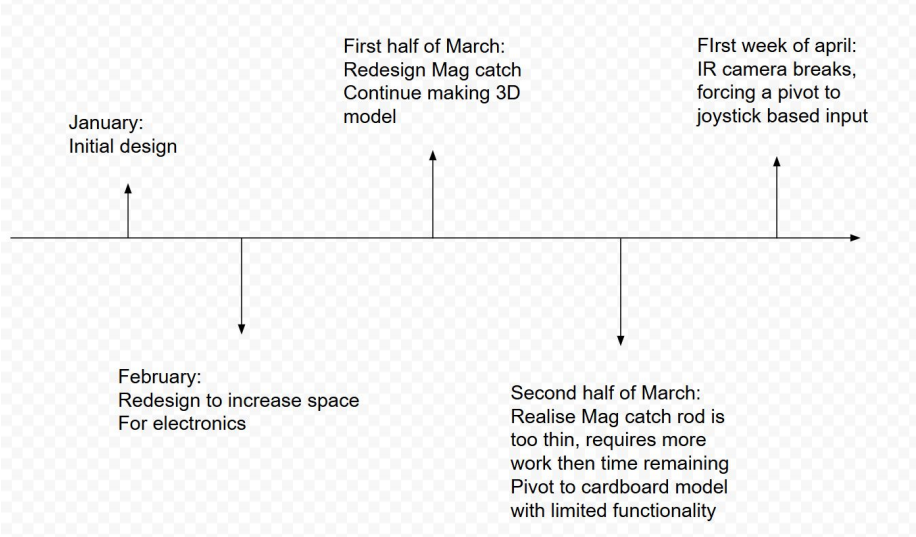
End result



User Testing

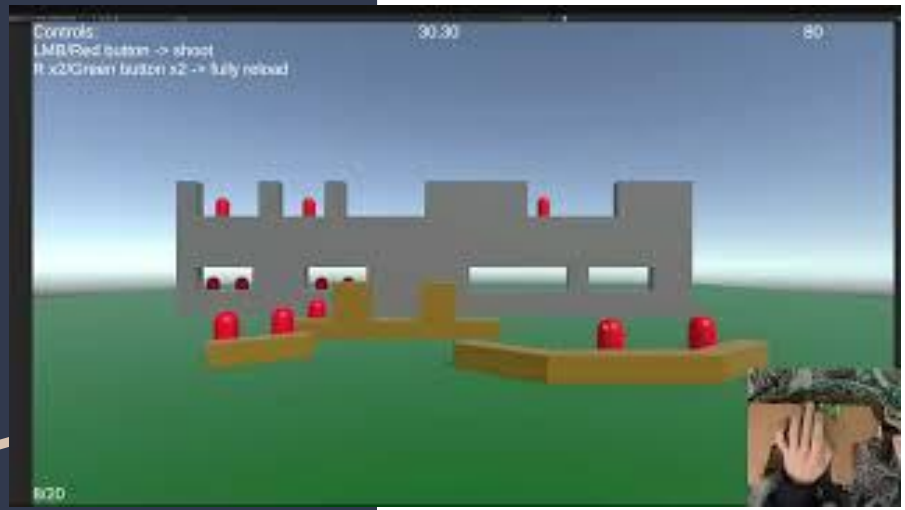
- Actually decent
  - Aside from most people saying they would not use it again
- TLX scores are solid
- ¾ claimed it helped with there immersion

Timeline



January:
Initial design
February:
Redesign to increase space
For electronics
First half of March:
Redesign Mag catch
Continue making 3D
model
Second half of March:
Realise Mag catch rod is
too thin, requires more
work then time remaining
Pivot to cardboard model
with limited functionality
FIrst week of april:
IR camera breaks,
forcing a pivot to
joystick based input

Demo



Controls:
LMB/Red button -> shoot
R x2/Green button x2 -> fully reload
